Menger's Theorem (Theorem 5.16; Theorem 5.21)

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \implies ”

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \implies ”

G is nonseparable

$\implies u, w$ lie on a common cycle

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \implies ”

G is nonseparable

$\implies u, w$ lie on a common cycle

$\implies \exists$ path $u \sim w$

$\implies \exists$ cycle $u - v - w \sim u$

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \implies ”

G is nonseparable

$\implies u, w$ lie on a common cycle

$\implies \exists$ path $u \sim w$

$\implies \exists$ cycle $u - v - w \sim u$

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \implies ”

G is nonseparable

$\implies u, w$ lie on a common cycle

$\implies \exists$ path $u \sim w$ that does not contain v

$\implies \exists$ cycle $u - v - w \sim u$

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \Leftarrow ”

By Contradiction.

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

Proof.

“ \Leftarrow ”

By Contradiction.

Suppose v is a cut-vertex of G

$\implies G - v$ contains ≥ 2 comps G_1, G_2, \dots

$\implies \exists u \in G_1, w \in G_2 : v - u \wedge v - w$

$\implies v - u, v - w$ lie on a common cycle

$\implies \exists$ path $u \sim w$ that does not contain v

$$\forall G_i \exists v_i \in G_i : v - v_i$$

S : Minimum Vertex Cut

$$\forall G_i \exists v_i \in G_i : v - v_i$$

$$\forall G_i \exists v_i \in G_i : v - v_i$$

S : Minimum Vertex Cut

$$\forall v \in S \forall G_i \exists v_i \in G_i : v - v_i$$

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

2-Connectivity (Problem 5.10)

A connected graph G with $m \geq 2$ is *nonseparable*

any two *adjacent* edges of G lie on a common cycle of G .

2-Connectivity (Extended Problem)

A connected graph G with $m \geq 2$ is *nonseparable*

any two edges of G lie on a common cycle of G .

Expansion Lemma (Problem 5.34; Theorem 5.18)

Let G be a k -connected graph and let S be any set of k vertices.

If a graph H is obtained from G by adding a new vertex w and joining w to the vertices of S , then H is also k -connected.

We prove that

$\forall v \in V(G)$: there exist k internally disjoint $v - w$ paths

We prove that

$\forall v \in V(G) : \text{there exist } k \text{ internally disjoint } v - w \text{ paths}$

This holds because

$\forall v \in V(G) : \text{there exist internally disjoint } v - s_i \text{ } (\forall s_i \in S) \text{ paths}$

We prove that

$\forall v \in V(G) : \text{there exist } k \text{ internally disjoint } v - w \text{ paths}$

This holds because

$\forall v \in V(G) : \text{there exist internally disjoint } v - s_i \ (\forall s_i \in S) \text{ paths}$

Corollary (5.19; Proved using Theorem 5.18)

If G is a k -connected graph and u, v_1, v_2, \dots, v_k are $k + 1$ distinct vertices of G , then there exist internally disjoint $u - v_i$ paths ($1 \leq i \leq k$) in G .

To prove $\kappa(H) \geq k$

To prove $\kappa(H) \geq k$

Let U be a vertex-cut of H .

We prove that $|U| \geq k$.

To prove $\kappa(H) \geq k$

Let U be a vertex-cut of H .

We prove that $|U| \geq k$.

CASE I: U is a
vertex-cut of G

CASE II: U is not a vertex-cut of G

To prove $\kappa(H) \geq k$

2-Connectivity (Extended Problem)

A connected graph G with $m \geq 2$ is *nonseparable*

any two edges of G lie on a common cycle of G .

2-Connectivity (Extended Problem)

A connected graph G with $m \geq 2$ is *nonseparable*

any two edges of G lie on a common cycle of G .

Consider two edges uv and xy .

2-Connectivity (Extended Problem)

A connected graph G with $m \geq 2$ is *nonseparable*

any two edges of G lie on a common cycle of G .

Consider two edges uv and xy .

2-Connectivity (Extended Problem)

A connected graph G with $m \geq 2$ is *nonseparable*

any two edges of G lie on a common cycle of G .

Consider two edges uv and xy .

Add w, z

Add $wu, wv; zx, zy$

w and z lie on a common cycle

Effects of Removing an Edge on Connectivity (Problem 5.22 (a))

- (a) If G is k -connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -connected.

Effects of Removing an Edge on Connectivity (Problem 5.22 (a))

- (a) If G is k -connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -connected.

To prove $\kappa(G) \geq k \implies \kappa(G - e) \geq k - 1$

Effects of Removing an Edge on Connectivity (Problem 5.22 (a))

- (a) If G is k -connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -connected.

To prove $\kappa(G) \geq k \implies \kappa(G - e) \geq k - 1$

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

$e = uv$ is a bridge of $G - U$

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

$e = uv$ is a bridge of $G - U$

$U \cup \{u\}$ is a vertex-cut of G

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

$e = uv$ is a bridge of $G - U$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

$e = uv$ is a bridge of $G - U$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

Choose any $U \subseteq V(G)$ with $|U| < k - 1$.

We prove that $G - e - U$ is connected.

G is k -connected $\implies G - U$ is connected

Suppose, by contradiction, that $G - e - U$ is not connected.

$e = uv$ is a bridge of $G - U$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE II : $|X| = |Y| = 1$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE II : $|X| = |Y| = 1$

$|U| = n - 2 < k - 1$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE II : $|X| = |Y| = 1$

$|U| = n - 2 < k - 1$

$\kappa(G) \geq k > n - 1$

CASE I : $|X| \geq 2 \vee |Y| \geq 2$

$U \cup \{u\}$ is a vertex-cut of G

But $|U \cup \{u\}| < k$

CASE II : $|X| = |Y| = 1$

$|U| = n - 2 < k - 1$

$\kappa(G) \geq k > n - 1$

But $0 \leq \kappa(G) \leq n - 1$

Effects of Removing an Edge on Connectivity (Problem 5.22 (b))

(b) If G is k -edge-connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -edge-connected.

$$\lambda(G) \geq k \implies \lambda(G - e) \geq k - 1$$

Effects of Removing an Edge on Connectivity (Problem 5.22 (b))

- (b) If G is k -edge-connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -edge-connected.

$$\lambda(G) \geq k \implies \lambda(G - e) \geq k - 1$$

Choose any $X \subseteq E(G)$ with $|X| < k - 1$.

We prove that $G - e - X$ is connected.

Effects of Removing an Edge on Connectivity (Problem 5.22 (b))

- (b) If G is k -edge-connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -edge-connected.

$$\lambda(G) \geq k \implies \lambda(G - e) \geq k - 1$$

Choose any $X \subseteq E(G)$ with $|X| < k - 1$.

We prove that $G - e - X$ is connected.

$$G - e - X = G - (e + X) \text{ is connected}$$

Effects of Removing an Edge on Connectivity (Problem 5.22 (b))

- (b) If G is k -edge-connected and $e = uv \in E(G)$, then $G - e$ is $(k - 1)$ -edge-connected.

$$\lambda(G) \geq k \implies \lambda(G - e) \geq k - 1$$

Choose any $X \subseteq E(G)$ with $|X| < k - 1$.

We prove that $G - e - X$ is connected.

$G - e - X = G - (e + X)$ is connected ($\because \lambda(G) \geq k$)

$$\kappa(G - e) \leq \kappa(G)$$

$$\kappa(G - e) \leq \kappa(G)$$

Effects of Removing a Vertex on Connectivity (Extended Problem)

Is $\kappa(G - v) \leq \kappa(G)$?

Is $\lambda(G - v) \leq \lambda(G)$?

$$\kappa(G - e) \leq \kappa(G)$$

Effects of Removing a Vertex on Connectivity (Extended Problem)

Is $\kappa(G - v) \leq \kappa(G)$?

Is $\lambda(G - v) \leq \lambda(G)$?

$$\kappa(G - e) \leq \kappa(G)$$

Effects of Removing a Vertex on Connectivity (Extended Problem)

$$\text{Is } \kappa(G - v) \leq \kappa(G)?$$

$$\text{Is } \lambda(G - v) \leq \lambda(G)?$$

Effects of Removing a Vertex on Connectivity (After-class Exercise)

$$\text{Is } \kappa(G) \geq k \implies \kappa(G - v) \geq k - 1?$$

$$\text{Is } \lambda(G) \geq k \implies \lambda(G - v) \geq k - 1?$$

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n - 1)/2$, then $\lambda(G) = \delta(G)$.

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n-1)/2$, then $\lambda(G) = \delta(G)$.

$$\lambda(G) \leq \delta(G)$$

We prove that $\lambda(G) \geq \delta(G)$.

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n-1)/2$, then $\lambda(G) = \delta(G)$.

$$\lambda(G) \leq \delta(G)$$

We prove that $\lambda(G) \geq \delta(G)$.

$$\lambda(G) = |X|$$

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n-1)/2$, then $\lambda(G) = \delta(G)$.

$$\lambda(G) \leq \delta(G)$$

We prove that $\lambda(G) \geq \delta(G)$.

$$\lambda(G) = |X|$$

$$1 \leq |S| = k \leq n/2, \quad |V - S| = n - k$$

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n-1)/2$, then $\lambda(G) = \delta(G)$.

$$\lambda(G) \leq \delta(G)$$

We prove that $\lambda(G) \geq \delta(G)$.

$$\lambda(G) = |X|$$

$$1 \leq |S| = k \leq n/2, \quad |V-S| = n-k$$

$$\lambda \geq k(\delta - (k-1))$$

Degree Condition for $\lambda(G) = \delta(G)$ (Problem 5.26)

If G is graph of order n such that $\delta(G) \geq (n-1)/2$, then $\lambda(G) = \delta(G)$.

$$\lambda(G) \leq \delta(G)$$

We prove that $\lambda(G) \geq \delta(G)$.

Q : What will fail if we do not exclude CASE I from CASE III?

Theorem (Menger's Theorem for Edge-Connectivity (Theorem 5.21))

For distinct vertices u and v in a graph G ,

*the minimum number of edges of G that separate u and v
equals the maximum number of pairwise edge-disjoint $u - v$ paths in G .*
